# Lecture 7: Expectation-Maximization (EM) Algorithm

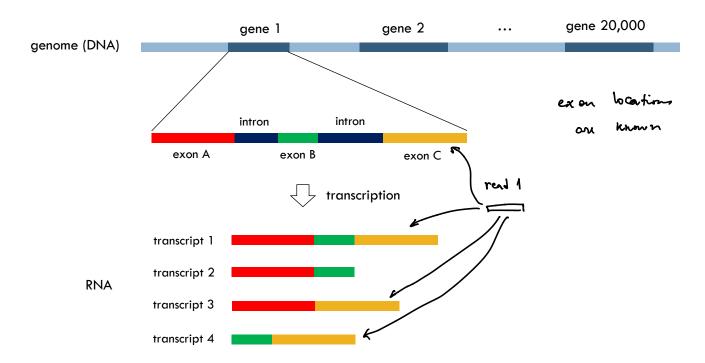

#### **Announcements:**

- □ Lab 3 due on Friday
- □ Lab 4 released tonight (due April 2)

## From previous lecture: RNA quantification

#### From genes to transcripts

### General RNA quantification problem

□ Input: aligned read data

read 1 
$$\begin{bmatrix} 0 & 1 & 1 & 0 & 0 & 0 \\ 0 & 1 & 1 & 0 & 0 & 0 \\ 0 & 0 & 0 & 1 & 0 & 0 \\ 0 & 1 & 1 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 & 1 & 0 \\ 1 & 0 & 0 & 0 & 0 & 0 \\ 1 & 0 & 0 & 0 & 0 & 1 \end{bmatrix}$$

$$\Rightarrow \begin{cases} \hat{\rho}_{1} = 0.01 \\ \hat{\rho}_{2} = 0.04 \\ \vdots \\ \hat{\rho}_{K} = 0.02 \end{cases}$$

$$\Rightarrow \begin{cases} \hat{\rho}_{1} = 0.01 \\ \hat{\rho}_{1} = 0.01 \\ \vdots \\ \hat{\rho}_{K} = 0.02 \end{cases}$$

$$\Rightarrow \begin{cases} \hat{\rho}_{1} = 0.01 \\ \hat{\rho}_{1} = 0.01 \\ \vdots \\ \hat{\rho}_{K} = 0.02 \end{cases}$$

$$\Rightarrow \begin{cases} \hat{\rho}_{1} = 0.01 \\ \hat{\rho}_{1} = 0.01 \\ \vdots \\ \hat{\rho}_{K} = 0.02 \end{cases}$$

$$\Rightarrow \begin{cases} \hat{\rho}_{1} = 0.01 \\ \vdots \\ \hat{\rho}_{K} = 0.02 \end{cases}$$

$$\Rightarrow \begin{cases} \hat{\rho}_{1} = 0.01 \\ \vdots \\ \hat{\rho}_{K} = 0.02 \end{cases}$$

$$\Rightarrow \begin{cases} \hat{\rho}_{1} = 0.01 \\ \vdots \\ \hat{\rho}_{K} = 0.02 \end{cases}$$

$$\Rightarrow \begin{cases} \hat{\rho}_{1} = 0.01 \\ \vdots \\ \hat{\rho}_{K} = 0.02 \end{cases}$$

$$\Rightarrow \begin{cases} \hat{\rho}_{1} = 0.01 \\ \vdots \\ \hat{\rho}_{K} = 0.02 \end{cases}$$

$$\Rightarrow \begin{cases} \hat{\rho}_{1} = 0.01 \\ \vdots \\ \hat{\rho}_{K} = 0.02 \end{cases}$$

General approach to solve this:

Expectation - Maximization Algorithm (En)

Model for read data generation:

relative abundances (on known)  $P_1 \leftarrow tr 1$   $P_2 \leftarrow tr 2$   $P_3 \leftarrow tr 3$   $P_4 \leftarrow tr 3$   $P_6 \leftarrow tr 3$   $P_8 \leftarrow$ 

True read origin/assignment (unknown)

Zik = { 1 if read i comes from transcript k
0 otherwise
K transcripts

form a N reads  $\begin{cases} \begin{bmatrix} 0 & 0 & 1 & 0 & 0 \\ 0 & 1 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 & 1 \\ 1 & 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & 1 & 0 \end{cases} \Rightarrow \text{"cleaned up" version of data ma}$ 

EM strategy: Estimate per and Zin in an alternating fashion and recursively

Initialize: 
$$\hat{p}_{K} = \frac{1}{K}$$
 for  $k = 1, ..., K$ 

Based on  $\hat{p}_{K}$ 's, estimate  $\hat{Z}_{ik}$ 's:

1. The middle of the algorithm

$$\hat{Z}_{11} = \frac{0.2}{0.2 \pm 0.6} = \frac{1}{4} \text{ read } 1$$

$$\hat{Z}_{12} = \frac{3}{4}$$

$$\hat{Z}_{13} = 0$$

P; = 0.2

$$\hat{Z}_{ik} = \begin{cases} \frac{\hat{\rho}_{k}}{\sum_{j \in S_{i}} \hat{\rho}_{j}} & \text{if } k \in S_{i} \\ 0 & \text{if } k \notin S_{i} \end{cases}$$

$$E-step$$

$$\hat{Z}_{11} = 0.7$$

$$\hat{Z}_{12} = 0.8$$

$$\hat{Z}_{13} = 0.6$$

$$\hat{Z}_{17} = 0.6$$

$$\hat{Z}_{17} = 0.9$$

$$\hat{Z$$

$$\theta_1 = \frac{0.7 \cdot 0.2 \cdot 0.2 + 0.2}{8}$$

$$\hat{Z}_{r_2} = 0.6$$

$$\hat{Z}_{r_3} = 0.9$$

$$\theta_{3} = 4 \times 0.4$$

First, estimate probability Dr:

$$\hat{\theta}_{k} = \frac{1}{N} \sum_{i=1}^{N} \hat{z}_{ik}$$

$$\hat{\theta}_{R} = \frac{1}{N} \sum_{i=1}^{N} \hat{z}_{iR}$$

$$\hat{\theta}_{R} = \frac{\hat{\theta}_{R}}{\frac{1}{N}}$$

$$\hat{\theta}_{R} = \frac{\hat{\theta}_{R}}{\frac{1}{N}}$$

$$\frac{1}{N} \hat{\theta}_{i}$$

$$\frac{1}{N} \hat{\theta}_{i}$$

$$\frac{1}{N} \hat{\theta}_{i}$$

$$\frac{1}{N} \hat{\theta}_{i}$$

$$\frac{1}{N} \hat{\theta}_{i}$$

Repeat. Go back to

## EM algorithm for RNA quantification

$$\hat{
ho}_k^{(1)} = rac{1}{K}$$

 $\Box$  For t = 1, 2, ...,

$$\hat{Z}_{ik}^{(t)} = \begin{cases} \frac{\hat{\rho}_k^{(t)}}{\sum_{j \in S_i} \hat{\rho}_j^{(t)}} & \text{for } k \in S_i \\ 0 & \text{otherwise} \end{cases}$$

$$\qquad \qquad \hat{\rho}_k^{(t+1)} = \frac{\frac{\theta_k^{(t+1)}}{\ell_k}}{\sum_{j=1}^K \frac{\theta_j^{(t+1)}}{\ell_j}} \quad \text{where} \quad \theta_k^{(t+1)} = \frac{1}{N} \sum_{i=1}^N \hat{Z}_{ik}^{(t)}$$

### EM algorithm for RNA quantification

- □ Does it converge? Yes.
- If so, does it converge to the correct values?

Let's look at a concrete example in Excel
